

A.R.F Anomaly File (ver.
1.4.299 - 1999)

Anomaly Classification: Force

Discovery Date: 1999

Current Status: Active

Anomaly: F-123

Codename: "Chrono-Slip"

SUBJECT DESCRIPTION:

F-123, known as "*Chrono-Slip*," refers to a force that creates localized disruptions in the flow of time, causing individuals to relive brief moments—often perceived as *déjà vu*. The effects range in scope from minor, individual experiences to large-scale events involving entire cities. While typically dismissed as memory malfunctions, these occurrences are often concentrated in areas of historical trauma or intense emotional significance.

ANOMALOUS PROPERTIES:

Localized Temporal Looping: F-123 temporarily creates a self-contained loop in which individuals or groups experience the same event twice in immediate succession. The duration of this loop is typically brief, ranging from a few seconds to an entire day, depending on the intensity of the slip. These loops are disjointed from normal time, with affected individuals often unaware of the event until they exit the loop and recognize the recurrence.

Memory Discrepancies: Those affected by F-123 usually report a vague sense of having already lived through the moment, often described as *déjà vu*. In more severe cases, individuals retain clear, conscious memories of the repeated events. Memory anomalies frequently cause frustration and confusion, as the events are recognized but cannot be explained. **Trauma Correlation:** Chrono-Slip events appear to cluster in areas that have experienced significant trauma or widespread emotional distress. While the force itself does not directly cause harm, repeated exposure in such locations often exacerbates emotional turmoil for individuals already affected by the trauma.

Scale Variability: Chrono-Slip events can affect single individuals, small groups, or even entire cities. Smaller slips are usually dismissed as psychological phenomena, but larger-scale occurrences draw significant attention due to their widespread and undeniable nature. The largest recorded event involved a city re-experiencing a full 24-hour period, causing mass hysteria when residents realized the anomaly.
